ONC, HHS Officials Announce Winners of Health App Contests

Staff | iHealthBeat | February 24, 2012

On Wednesday, the Office of the National Coordinator for Health IT and Health 2.0 announced the winners of a contest that challenged software developers to create applications using the popHealth framework, Modern Healthcare reports (Lee, Modern Healthcare, 2/23).

In February 2010, ONC made the open-source popHealth software available to help health care providers cull data from electronic health record systems to discern trends among patient populations.

The Web-based tool can automate the collection and reporting of clinical quality data for Stage 1 of the meaningful use program. Under the 2009 federal economic stimulus package, health care providers who demonstrate meaningful use of certified EHR systems can qualify for Medicare and Medicaid incentive payments.

An advertisement for ClinCapture, a cloud-based data capture platform. The background is a dark purple gradient. On the right, a hand is shown pointing at a digital interface with various data points and labels like "Issues", "Monitoring", and "Incidents". The text on the left reads "clinCapture THE ONLY FREE VALIDATED EDC" and "Intuitive platform. Drag-n-drop tools." Below this is a white outline of a person's head and shoulders. At the bottom right, there is a white button with the text "GET STARTED".
